

Solaris™ 10 Operating System Training and Certification

Advance your skills and get the most out of this truly innovative operating system

10 moves ahead—The Solaris™ 10 Operating System (OS)

The operating system's unique position in the hardware/software solution stack makes it a critical element in delivering reliable application services. While the Solaris OS is already recognized as one of the leaders in the industry in reducing the cost, complexity, and risk associated with today's computing environments, the Solaris 10 OS significantly extends — and adds to — these capabilities. Through new functionality, the Solaris 10 OS delivers optimal utilization, relentless availability, unparalleled security, and extreme performance for both vertically scaled and horizontally scaled environments.

Ramp up your skills

Since 1996, more than 700,000 people have purchased training and certification exams from Sun, the creator and source of the Solaris OS. And now you can ramp up your Solaris 10 OS skills. Sun's innovative learning solutions help you get ahead and take advantage of the advanced features and benefits of this truly visionary operating system.

have the technical competency, professional dedication, and motivation that employers value. In fact, according to Certification Magazine's 2005 salary survey, Sun Certified System Administrators earned on average 31% more than system administrators certified on other operating systems.

Recognized industry-wide, Sun's technology training and certification options support three distinct job roles to help you gain the necessary knowledge and technical expertise in administering systems, networks, or security in a Solaris 10 OS environment.

Need proof? Certify.

Attaining a Solaris OS certification from Sun is a great way to invest in your professional development and help boost your earning potential by providing hard evidence that you

Highlights

- Help increase your opportunity for professional advancement, including salary increases, job role changes, and promotions
- Stay current on the latest technology
- Provide employers with hard evidence that your skills and qualifications are current
- Enhance your professional credibility, which can lead to greater respect from management and peers
- Take advantage of flexible training options that address your personal schedule and learning style
- Get peace of mind that your abilities are being validated by the creator and source of the Solaris 10 OS

Certification	Who can benefit?
Sun Certified System Administrator for the Solaris OS	This certification is for system administrators tasked with performing essential system administration procedures on the Solaris OS and technical application support staff responsible for administering a networked server running on the Solaris OS.
Sun Certified Network Administrator for the Solaris OS	This certification is for experienced system administrators who are or will be responsible for administering Sun systems in a networked environment that includes LANs and the Solaris OS.
Sun Certified Security Administrator for the Solaris OS	This certification is for system administrators with previous experience administering security in a Solaris OS environment.

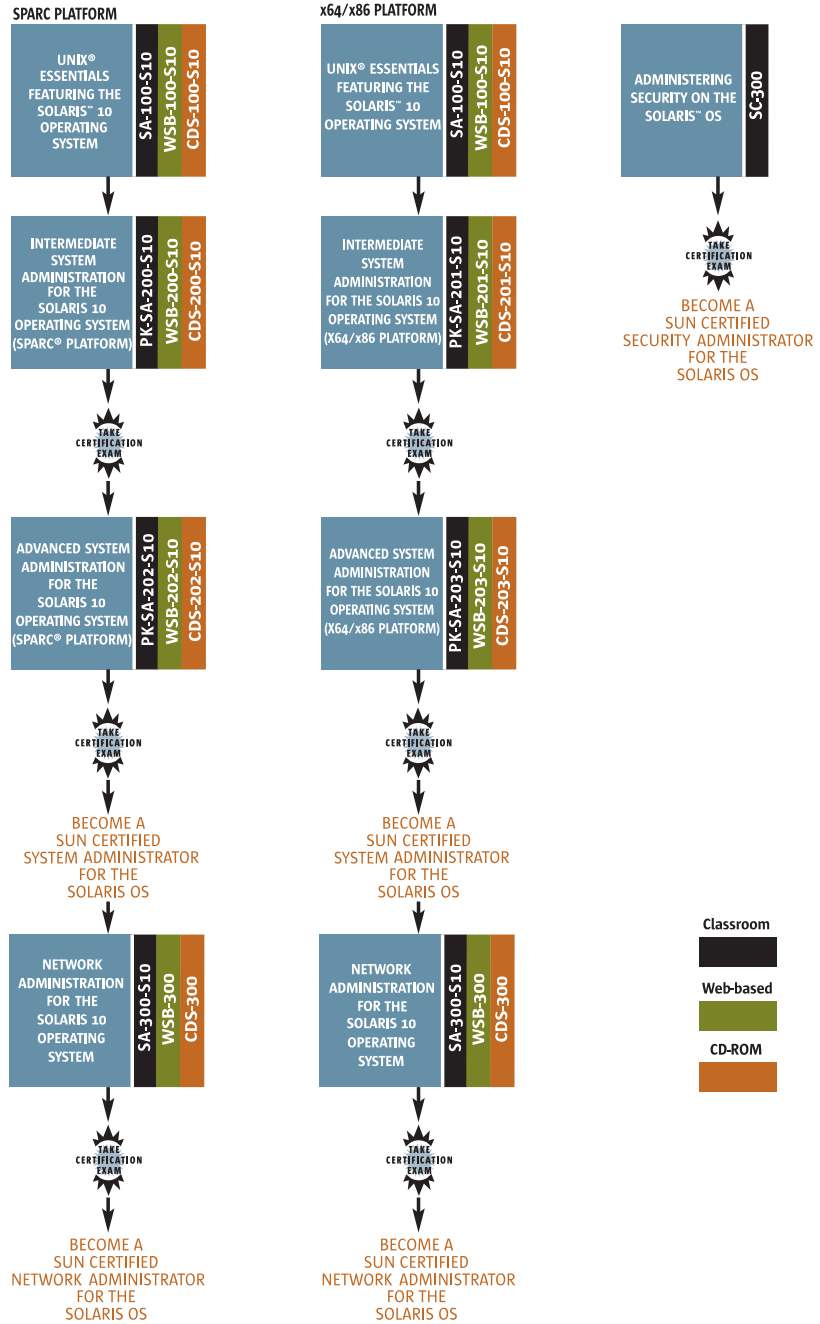

Certification made simple

Take the guesswork out of preparing for exams by following Sun's certification learning paths. Each path provides direction on what courses you need to take to build your skills and prepare for certification. And with paths designed specifically for instructor-led training, web-based training, and CD-ROM based training, you can pick the option that's right for you.

Flexible learning: the value of choice

No two learners are the same, so Sun provides flexible training options that help you manage your busy schedule while advancing your career. You can mix course delivery methods to create a personalized path to achieve your training and certification goals. For example, take your first course via the web and then attend an instructor-led course or vice versa — you choose.

Are you an experienced Solaris 8 or 9 OS system administrator?

Here's a great deal for you...

If you're an experienced Solaris 8 or 9 OS system administrator, you can meet immediate business requirements by attending the following courses:

- Solaris 10 New Features for Experienced Solaris System Administrators (5 days) (SA-225-S10) — Explore new functionality found in the Solaris 10 OS including system management, DTrace, network, and installation features.
- Dynamic Performance Tuning and Troubleshooting With DTrace (3 days) (SA-327-S10) — Become proficient using DTrace to diagnose application and system problems.

If you're an experienced UNIX® system administrator on other operating systems, then you can choose from:

- Solaris System Administration for Experienced UNIX Administrators (5 days) (STS-276-S10) — This course provides a platform for experienced UNIX administrators to migrate from one of many UNIX platforms to the Solaris OS.

- Solaris OS Administration for Experienced HP-UX and Tru64 Administrators (5-days) (STS-277) — Gain the necessary knowledge and skills to perform core system administration tasks in the the Solaris 10 OS.

New learning option to fit your needs

Live Virtual Class training brings accredited instructors and high-value content right to your desktop and makes high-quality learning more accessible, more convenient, and more affordable. This new web-based training option helps reduce your time away from work, and maximizes the time devoted to improving your skills and contribution to the business.

- Solaris Containers (1 day) (VC-SA-226-S10) — Identify features found in the Solaris 10 OS including zone features and concepts, configuring zones, resource pools, and using the zonecfg command.
- Solaris Predictive Self-healing (1 day) (VC-SA-227-S10) — Learn about fault and system management features found in Solaris 10 including changes to fault management architecture and the service management facility.
- Solaris Security (1 day) (VC-SA-228-S10) — Identify authentication and security changes found in Solaris 10 including changes to password checking, features of least privilege, SCF, hardware acceleration for IKE, and IP filter firewall.
- DTrace Facility (3 days) (VC-SA-327-S10) — Become proficient using DTrace to diagnose application and system problems.

EXTRA! EXTRA! LEARN ALL ABOUT IT (FOR FREE!)

Get started on the Solaris 10 OS today. Take the free web-based course “Solaris 10: Ten Moves Ahead of the Competition” for an overview of the key features, the high-level value proposition, and introductory technical information that illustrates the advantages of using the Solaris 10 OS. See why Solaris 10 can be a compelling choice for your business needs.
